

Task Force Fusion – Strategic Academics Guru Executive Agent: Accelerating Schoolhouse & Curriculum Development

Conceptual Design Process

- Curriculum Development Orchestrator
- Sub Agent Development
 - Mission Analysis
 - Program Objectives
 - Learning Analysis
 - Learning Objectives
 - Course Materials
- CDO Guidelines to run in GenAI.mil

- CDO Deployed to build HTML Executable (locally hosted)

- SAGE Simulator

Methodology, Findings, Future Recommendations

Methodology

- Experimented with AWS Kiro, Amazon Quick, Replit to develop agent skills and product outputs
- Also experimented with MFR 6th Comm Battalion GenAI.Mil API, SIX.AI

Findings

- Can execute broad framework of the vision for SAGE
- Need further refinement and development of individual sub-agents, particularly their outputs (decision brief, POI framework, schedule, evaluation plan, etc.)

Future Recommendations

- Continue work to replicate SAGE in GenAI.mil for broad applicability and resource sharing across the TECOM Enterprise
- This COA will accelerate as GenAI.mil incorporates new software developer agent capabilities (e.g. Codex)

BACKUP

Same Problem, Different Required Outputs and Tasks

SAGE

Problem: Build a sUAS School and associated POI

Required Outputs:

- DOTMPLF Analysis and Results
- CG Executive Summary
- CG Decision Brief
- 3 COAs with Risk-Benefit Analysis
- Justification and Sourcing

SME

Problem: Build a specific POI, or component of POI

Inputs: T&R Events, Lessons Learned

Required Outputs:

- CDD/POI/MCTIMs
- Course Structure
- Evaluation Plan & Instruments

Required Tasks:

- Mission Analysis
- Identification of gaps between target and end state
- Learning Analysis
- Identify learning objectives and outcomes
